

## Minipack Torre Mailbag Packaging Machine

**Price: 2375 EUR**

Minipack Torre Mailbag Packaging Machine

This machine is in excellent condition and ready for production.

The photos show the actual product.

Made in Italy.

Manufacturer's description:

The Mailbag is a compact digital bagging system, ideal for packaging brochures, newspapers, and books. Powered by a single-phase power supply (airless), it's easy to use with wheels, and the system can be easily moved from one location to another with minimal fuss.

A product, such as a magazine, inserted into the feeder activates a photocell, detects the package, and moves the bag and product into the sealing system. A combination of transverse and longitudinal seals closes the package and creates a seal for the next product.

The finished package gently falls into the receiving hopper at the bottom of the machine.

Technical data:

Production speeds, depending on package and film dimensions (up to 1200 pph)

Min. package width: 160 mm

Maximum package width: 250 mm

Min. package length: 100 mm

Maximum package length: 360 mm

Maximum film thickness: 30 microns

Machine dimensions: 600 mm x 840 mm x 1050 mm

Weight: 144 kg

Power supply: 230V

Power consumption: 0.6 kW
