

Automatic die-cutting and embosing machine TL-780RD

Price: upon request EUR

Automatic die-cutting and embosing machine TL-780RD

The machine is built on a die-cutting basis with an automatic feeder, mounted on a common frame,

The machine was built on the basis of the legendary Sargolia machine.

Very quick machine preparation, incomparable with flat diecutting machines.

Technical data:

Max sheet format 780x560mm

Min format sheet 200x300mm

Max. Stack height 700mm

Material weight 100-2000g / m²

Max efficiency 2800 sheets / h

Power consumption 15kW + compressed air

Weight 6000kg

Transfer foil 1-560mm

Working temperature 1-150°C

380V power supply

Dimensions of the machine: 3850x1920x2200mm

Equipment:

- pneumatic clutch and brake
- electric quick assembly frame
- control panel with a touch PLC programmer in Polish/English
- four independent foil movements, controlled by stepper motors
- broken film sensor or no sheet feed sensor
- 4 sections of the heating plate, saving energy
- automatic impression force adjustment
- central lubrication
- Honey Comb-plate with zips for quick matrices assembly
- additional safety covers
- tools for handling and instructions, CE declaration
- built-in compressor
- hard sheet for pressure

The machine is available „on the spot”

We provide assembly and training (individual valuation)

12 months warranty.

The machine is brand new.
