

Machine for hard cover making 1050×740

Price: 10000 EUR

Table for hard cover making 1050×740

The device is brand new, with a 12 month warranty.

European production, based on brand-name components.

Work cycle:

The operator manually hands the covering material to a gluing device in which the animal glue is automatically applied (working temperature 60-70°C).

The covering material sheet with the glue applied, the operator places it manually on the stage, then manually adds the cardboard and joint board sheets.

The operator prepares the pre-prepared cover manually to the device in which the top and bottom of the covering material are wrapped up and glued (patented brush system).

During the sizing operation, the cover is pressed through the arrangement of the guide rollers.

Covers leaving the device are immediately suitable for further processing

The machine is equipped with:

- A gluing machine applying glue to the top of the sheet
- table with a suction
- fixing elements for covering material and cardboard
- a module for wrapping the cover
- receiving table

Technical data:

Max format: 1050x740mm

Min format: 140x140mm

Capacity: 100-150 covers / h

Thickness of the layer: 80-170 gsm

Thickness of cardboard: 1-4mm

Wrap up: 13-20mm

Temperature of the adhesive: 30-100 °C

Capacity of the bender: 2-3kg

Smooth speed control of rollers and brushes

Types of veneer material: fabric, laminated paper, photographic paper, imitation leather, PVC, polyurethane.

Dimensions of the machine: 1600x1800x1000mm

Power supply: 380V

Power consumption: 3.7kW

Weight: 300kg

We invite you to tests to our headquarters

Machines are available from stock.
