

## Thermographic machine Adana Mo. 318 for relief printing

**Price: 1500 EUR**

Thermographic machine Adana Mo. 318 for relief printing

Working width 32 cm.

Very good condition, machine ready for operation.

Description:

Easy-to-use handheld machine: the material for thermography is sprinkled with powder. The material is then placed on a conveyor that passes under the oven to achieve the desired thermographic effect. The conveyor speed is infinitely variable and can be precisely set using a potentiometer. The heating unit can be raised or lowered or even moved forward, depending on the requirements of thermography. The adjustable conveyor speed allows thermography at different speeds and with temperature control.

Power supply 220 V single-phase
